1.4. 63213 – Show Work enhanced details.....	4
1.5. Reports.....	4
Appendix – Customer Specific Features.....	5
Appendix – Fixes.....	5

Introduction

This document is intended to update all users on the features and functions that have been added to Depot Allocation in version 1.35.0.

The release contains various improvements and fixes.

Changes / improvements

1.1.Daily Allocation

59325 – Improved tool tip information

When the ⓘ icon appears besides an employees' name in Daily Allocation, the tooltip now provides more information about which soft rule is broken.

Willan, D ⓘ	203	SP	SP	3	1331	0448	13	
Jones, L	Breaks company rules: Training card expired						1	13

62794 & 63224 – Improved colour contrasts

In Daily Allocation, a duty that is provisionally allocated is now highlighted in a stronger yellow, to improve contrast against the rest of the duty table.

Additionally, when allocating a duty that fits within an employees spare time, the colouring now ensures that duty details can still be read.

63752 – Cut duties filter

Cut duties and cut duty portions will now not show in the list of duties when the "Unallocated" filter is selected. A new "Cut" filter has been added to show just cut duties and cut duty portions.

1.2.62679 – Extending driver loans that start in a closed week

Where a driver loan has started in week that is now closed but ends in open week, it is now possible to edit the end date to another date in an open week. It remains not possible to adjust loan start or end dates that fall in a closed week.

1.3.63146 – Increase radius of remote clocking

The maximum radius of a remote clocking in location has been increased from 50 metres to 999 metres.

1.4. 63213 – Show Work enhanced details

The Show Work > Details and Show Work > Driving Hours windows have been enhanced with additional information showing calculated driving time and calculated layover time. Some existing column headers have been renamed and totals have also been added to several columns.

1.5.Reports

63231 & 63697 – Driver Info Report

The Driver Info report has been updated to also be able to include the fields “Work Basis” and “Rota ID”. Additionally, fixed a bug related to “inactive” employees.

63612 – Cut Duty Report

Minor enhancements have been made to the Cut Duty Report, including addition of a Notes column.

63144 – Actual Rota Report

Where an employee is not allocated a duty, the attendance code will now show on the Actual Rotas report. For example, an employee deallocated and made spare will now show with their original duty number struck through followed by the SP code.
