

OmniBASE

EPM E03 vehicle types

1. Introduction

This brief note explains how to configure vehicle types in OmniBASE for EPM exports.

2. Vehicle Types Maintenance

The export to EPM takes the Vehicle Type from the Grouping column in 'Vehicle Types Maintenance' – found under Edit > Vehicle Types:

Vehicle Types Maintenance			
Code	Grouping	Description	Board Note
0		Volvo B9TL	
1		Streetlite E6	
2		ADL MMC400	
3		ADL MMC200	
4		*Not In Use*	
5		*Not In Use*	
6		*Not In Use*	
7		*Not In Use*	
8		*Not In Use*	
9		*Not In Use*	
A		Scania N94UD	
B		Yutong E10	
C		Volvo B11RT	
D		Volvo B7TL	
E		Solo LCEB	
F		Volvo B5LH	

The required code needs to be present in both the Code and Grouping columns.

This also means that several individual vehicle types can be grouped as a single type for the EPM export.

For example:

- all double deck vehicles might be grouped together, or all Euro 6 vehicles might be allocated the same code to be differentiated from non-Euro 6 for purposes of the mileage export.

If no entry is present in the Grouping column or no vehicle types are specified, the export will use A as the default value.
