

OmniBASE: Exporting Mileage Schedules from OmniBASE for the EPM Traffic System (E03 Export)

1. Steps required to produce an export file from OmniBASE

- In Omnibase go to Distances>Export>EPM Traffic>E03 Export
- Enter the following:
 - Depot Code
 - Commencement date for schedule
- Select the schedule type to be exported (Normal or special 1, 2 or 3)
- Select the required Omnibase files (usually three files - Mon to Fri plus a Sat & a Sun)
- Select bus workings – default is all bus boards else highlight required bus boards
- The export file will be created in c:\epm\mls with a compressed version in the “zip” folder below.
- The export routine will send two prints to your default printer: a mileage summary for the week which should be checked against expected totals; and an exception report which indicates data issues which can affect the accuracy of the export.
